

VISTA COMPATIBLE

Installation Instructions for EMIGMA V8.1

You must uninstall EMIGMAV7.8!

1) This version contains an automatic update capability. Upon opening the program you will be allowed to perform an automatic update (if connected to the internet) to retrieve the latest upgrades. Upgrades will be available on average once every week. Updates available after your maintenance contract expired will not be downloaded.

2) Included on the CD are updated examples, tutorials, technical abstracts, PowerPoint presentations and MANUALS. The standard installation installs them to /Program Files/EMIGMAV8.1/.

Previous Users: **Please refer to the upgrade paragraph below.**

To uninstall previous versions use Control Panel -> Add/Remove Programs -> Please remove any demo versions as well. V7.8 must be uninstalled prior to installation.

3) Insert the CD into your CD-Rom.

If AutoRun is configured on your computer, the installation will begin automatically.

If not, then Run CD_Drive:\ AppSetup.exe

You will be asked if you wish to install the “Application” and/or the “Documents”. The “Application” segment contains the necessary portions of the software while “Documents” includes manuals, tutorials and sample databases. The “Documents” segment may be installed later or simply copied to your computer. If you chose to install both and the installation requires you to re-boot after installation of the “Application” segment, then the installation will go automatically to install the “Documents” segment after re-boot.

During installation you will be asked for an EMIGMA license file (peuserA.dll). You will be given the options:

- a) **I have an EMIGMA license file.** You may then browse for this file after clicking the “Next” button.
- b) **I would like to download my license file via the Internet.** You will be asked for the password that has been provided. If you do not have the password then please contact support@petroseikon.com
- c) **Finish the installation without a license file.** You can copy the file to your /EMIGMAV8.1/bin directory manually.

Special Instructions for Windows 2000, Windows XP and Windows Vista Users:

--- The installer must have administrative privileges.

After installation it is recommended to check the following environment variables:

(Access environmental variables through “Control Panel -> System -> Advanced”)

1) TGS_LICENSE_FILE should have the location of the file password.dat

e.g. “c:\Program Files\Emigmav8.1\bin\password.dat

2) Path should have the location of the “bin” directory

e.g. “c:\Program Files\Emigmav8.1\bin

4) Installing the Drivers for the Sentinel Dongle:

EMIGMA is licensed via the hardware dongle supplied to you. In Windows NT,2000, XP,2003 Server and Vista, no driver for this dongle is included from Microsoft. However, the installation attempts to install this driver automatically so the dongle can be accessed during use of EMIGMA. If you need to install the driver manually, inside the EMIGMAV8.1 directory you will find a sub-directory called “/drivers”. Inside that directory, double-click on “**Sentinel Protection Installer 7.x.x.exe**” and follow the simple instructions. This driver is suitable for Windows 98,Me,NT,2000,XP Home and XP Professional, 2003 Server and Vista.

The dongle is a “Sentinel Superpro” manufactured by SafeNet. If you have problems with the driver installation you may wish to look at the SafeNet website.

<http://www.safenet-inc.com/support/tech/sentinel.asp> contains the latest drivers for download if you have any problems.

5) Ensure that your dongle key is attached to your USB or parallel port.

(OVER.. Please READ)

6) Important Extras: Please READ otherwise you may have PROBLEMS!

6a: If you have an environmental variable set for a previous version, you will want to delete this earlier variable.

6b: If you have previous versions of EMIGMA on your computer, make sure that "...\\Emigmav8.1\\bin" is the first EMIGMA installation on your path.

TGS LICENSE FILE

6c: You will encounter a warning message when using EMIGMA V8.1 'TGS License File Error'. This is only a warning message. Please click OK to this message and continue normal use. If this is found to be an onerous problem, please contact us at support@petroseikon.com

EMIGMA contains several 3D visualization applications and these utilize 3D graphics libraries from OPEN_INVENTOR which is distributed originally by a company called TGS under license from Silicon Graphics.

7) MAINTENANCE UPGRADE NOTE:

If you are a previous user of EMIGMA, you may require a special **EMIGMA_License_UpgradeA.exe** especially if you have just renewed your contract. After installation of the software, please copy this executable to the .../EMIGMAV8.1/bin on your harddrive and run this executable (double-click) with your dongle in place either on the parallel port or the USB port. This is needed only once and will run only once. This will upgrade your dongle to any new functions for which you are licensed. This executable will run during the installation if you choose the option to download your license file and answer yes when asked if you would like to upgrade your license.

Note: This upgrade executable may be received by email or may be downloaded via the internet particularly when executables or zip files cannot be delivered via email to you. Please contact Support (support@petroseikon.com) if you require assistance.

YOU NEED NOT RUN THE UPGRADE ON EVERY COMPUTER THAT YOU USE! The upgrade program operates on your dongle to modify it to represent the status of your license. If you have purchased maintenance this will also extend your dongle license for the new maintenance period.

8) New Support Capabilities:

We now offer an online support capability. Simply go to our web site, find the online support link and come online. We are watching it carefully but you may want to e-mail our support to book a specific time to talk to us through this online interface.
